

Ideation Phase
Empathize & Discover

Date	30 September 2025
Team ID	SWTID-2026-9682
Project Name	AI-Augmented Backend Development – AI StudyBuddy API
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to help teams better understand their users. Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Empathy Map: AI StudyBuddy

The persona is Rahul, the second-year engineering student from the project's scenario-based case study. He is preparing for several semester exams while learning skills for internships and placements, and his study material is spread across lecture notes, PDFs, textbooks, online articles and handwritten notes.

Figure 1: Empathy map canvas for the AI StudyBuddy user (Rahul)

Key insights from the map:

- Time is Rahul's biggest constraint. Summarising, making flashcards and planning by hand compete with actual studying.
- His material lives in many formats and apps, so one central place to generate and keep resources is valuable.
- He wants to know whether he understands a topic before the exam, and a plan that fits his exam dates.
